

CLEANING A HAIR SYSTEM

Providing regular care and maintenance for your client's hair systems is extremely important. Maintaining the hair system regularly will help in maximizing the life of the product while improving the overall experience for the client.

Required Materials

C-22 Citrus Solvent Spray

Dawn Liquid Dish Soap

Cool Clarity Deep Clean Shampoo

Hydramoist Argan Conditioner

Hand Towels

| | |
|-------------------|-------------------------------------------|
| Glue Type: | Water-based liquid adhesives (Ghost Bond) |
| Base Type: | Polyurethane (Skin) Mesh Fabric (Lace) |

STEP 1

REMOVING THE ADHESIVE FROM THE BASE

Wrap a towel around your pointer finger then gently start to remove the adhesive off the base by rolling the residue towards the outer edges of the hair system. If the adhesive is not coming off with this method than proceed to apply C-22 solvent on the base and try again.

STEP 2

WASHING OFF OILS AND ALL ADHESIVE RESIDUES

Pour a quarter size amount of Dawn dish soap on the base. Gently lather the soap covering the entire surface of the base. This process gets rid of all the oils and other residue build ups.

STEP 3

FINAL WASH BEFORE DRYING

Rinse off the Dawn dish soap with water then proceed to shampoo and condition the hair system to balance the acid levels. We recommend using Best Hair System's Argan Oil Shampoo & Conditioner for this part of the step.

STEP 4

STARTING THE DRYING PROCESS

Layout a towel and place the hair system with the base down to the towel. Comb the hair out towards the edges making sure that the hair is not tangled and is completely clean.

STEP 5

SOAKING UP WATER WITH A TOWEL

With the system laying flat on the towel proceed to roll the towel with the hair system inside it. Gently squeeze the towel so the water is soaked into the towel as much as possible. Unroll the towel and lay the hair system flat.

STEP 6

LET THE HAIR SYSTEM AIR DRY

Now the system has been cleaned, shampooed, conditioned and towel dried, all that's left to do is to let the hairpiece air dry. Place it on a mannequin head if one is available.
